

Take your print strategy to the cloud

PROTECT DATA

INNOVATE

SECURE PRINT

BOOST PRODUCTIVITY

Canon commissioned IDC Asia/Pacific to survey over 200 decision-makers across Australia and New Zealand to better understand the current state of print and document management in the region. The findings reveal the urgent need for secure, cost-effective and flexible print solutions.

Cloud-based printing offers a range of compelling benefits for businesses, from protection against data breaches to enabling printing from anywhere and simplifying complex workflows—all key to boosting productivity and creating a modern work environment.

TAKE CHARGE OF CHANGE

Canon

Protect your business from data breach

Strengthen your data security with Canon's robust print solutions. From secure print release and encrypted document handling to user authentication across all devices, Canon's technology provides comprehensive protection against unauthorised access and data breaches.

- User authentication prevents unauthorised access
- "Print and Delete" enhances security
- Supports secure mobile and guest printing

- PIN and card authentication delivers controlled access
- Triple-overwrite hard drive sanitation prevents data leakage
- AES 256-bit encryption

- Documents are encrypted to and from cloud storage
- Compatible with OneDrive and Dropbox, protecting sensitive data at every stage

Stay competitive through innovation

Empower your business to stay ahead of the pack with Canon's innovation-driven solutions. Built on zero-trust principles, boasting advanced encryption and compliant with relevant Global ISO standards, our solutions help you maintain your competitive edge.

- Built on zero-trust principles, enforcing strict user authentication to prevent unauthorised access
- Multi-factor authentication for secure remote access
- ISO 27001 compliance meets stringent security standards

- Microsoft Azure secure hosting delivers compliance with data sovereignty requirements
- Tenant isolation ensures data separation and privacy

- Trusted Platform Module (TPM) 2.0 securely stores cryptographic keys, enhancing compliance and security
- Advanced TLS 1.3 and IPsec encryption to safeguard data in transit
- Complies with ISO standards for data protection, aligning with industry security benchmarks

Print securely from anywhere

Canon's cloud solutions empower teams to print and access documents securely from anywhere. With secure mobile pathways, multi-factor authentication and seamless cloud integration, employees can work flexibly while your data remains protected.

- Supports mobile printing through secure pathways, enabling employees to print safely from any location
- Multi-factor authentication (MFA) secures remote access to cloud-connected devices
- Offers flexible access to cloud-stored documents while enforcing zero-trust principles

- Enables secure transfer of files to/from cloud storage, allowing remote access with encrypted document handling
- Integrates with popular cloud storage platforms, enabling hybrid work without compromising document security

- Provides secure cloud storage in Microsoft Azure, allowing employees to access documents securely across regions
- Automates data synchronisation across devices, supporting remote access without risking data integrity

Simplify your workday and boost productivity

Canon's cloud solutions help streamline your workday and boost productivity. With centralised management, automated security updates and regular remote device settings, you can simplify complex workflows and ensure seamless operations across all devices.

- Provides detailed reports and audit trails
- "Secure by default" setup includes AI-powered early threat detection monitoring
- Centralised security policy means consistent settings across all devices

- Pre-configured with recommended security settings
- Built-in reporting tools and device usage logs
- Security navigator tool recommends best settings based on environment

- Enables flexible scanning options, simplifying secure document distribution
- Automated updates and security patches minimise downtime and boost productivity
